Project Name	Importing and Securing Data in ServiceNow
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem–Solution Fit in this project focuses on identifying the challenges faced by organizations when importing data into ServiceNow and ensuring that each record is properly linked to the respective employee. In many cases, imported records do not contain complete employee information such as department or designation, which creates difficulties in reporting and analysis. Users often spend additional time manually updating records, which leads to inefficiency and errors.

The proposed solution addresses this issue by implementing a secure data import process that automatically links records with employee information using unique identifiers. The system retrieves relevant employee details and populates them into the records, making reporting easier and more accurate. This solution effectively meets user needs by reducing manual work, improving data quality, and ensuring secure handling of information.

Purpose:

- ❑ Solve data import and employee linkage problems in a way that fits the needs of users working with ServiceNow records.
- ❑ Improve efficiency and increase solution adoption by automating the process of linking records with employee details.
- ❑ Enhance communication and reporting strategies by ensuring accurate employee information (such as department) is available in each record.
- ❑ Increase user trust in the system by reducing manual errors and providing secure data handling mechanisms.
- ❑ Understand the existing challenges in importing data and improve the process for better reporting, decision-making, and operational performance.

Template:

Define CS, fit into CC

1. CUSTOMER SEGMENT(S) — CS

ServiceNow administrators and developers
IT support teams and HR departments
Organizations managing employee records
related operational

6. CUSTOMER CONSTRAINTS — CC

What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, cultural, network connection, available devices.

Limited technical knowledge in automation
Data privacy and security concerns
Inconsistent employee identifiers across systems

5. AVAILABLE SOLUTIONS — AS

Manual entry or spreadsheet mapping
Scripts without proper automation framework
External reporting tools to combine data

Explore AS, differentiate

Focus on J&P, tap into BE, understand RC

2. JOBS-TO-BE-DONE / PROBLEMS — J&P

Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.

Import external data into ServiceNow securely.
Link each imported record with the correct employee.
Retrieve employee details such as department, designation, and manager

9. PROBLEM ROOT CAUSE — RC

Imported records are not automatically linked to employee reference tables .
Lack of automation in retrieving related employee attributes

7. BEHAVIOUR — BE

Import data using basic tools
Manually update employee fields
Cross-check data with HR systems
Spend time correcting reports

Focus on J&P, tap into BE, understand RC

Identify strong TR & EM

3. TRIGGERS — TR

Need for accurate reporting and analytics

4. EMOTIONS: BEFORE / AFTER — EM

Before: Confusion due to incomplete records
After: Confidence in data accuracy

10. YOUR SOLUTION — SL

Develop a secure data import process in ServiceNow using Import Sets and Transform Maps that:
Automatically links records to employees using unique identifiers (Employee ID or email)
Retrieves employee details like department and manager into the record
Applies role-based access control for data

8. CHANNELS of BEHAVIOUR — CH

ServiceNow platform usage

Team meetings for data correction

Extract online & offline CH of BE
