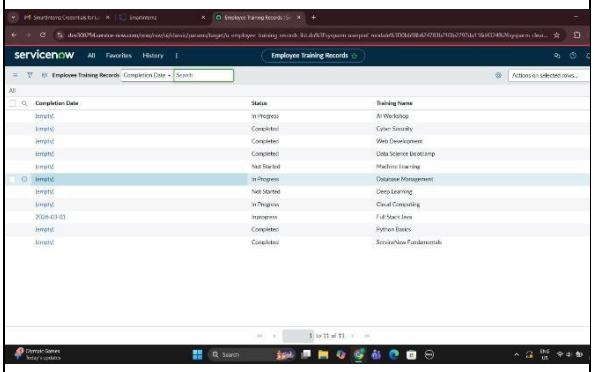
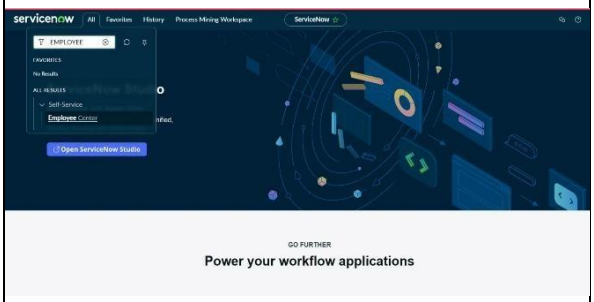
Project Development Phase
Model Performance Test

Date	20 February 2026
Team ID	LTVIP2026TMIDS39802
Project Name	Importing and Securing Data in ServiceNow
Maximum Marks	

Model Performance Testing:

S.No.	Parameter	Values	Screenshot
1.	Model Summary	This project focuses on importing and securing employee-related data in ServiceNow by linking each record to a specific employee and automatically retrieving key details such as department for efficient reporting. A custom table with a reference field is used to associate records with employees, and dot-walking auto-fetches related information like department and email. Data is imported through Import Set Tables and Transform Maps for accurate mapping. Access Control Lists (ACLs) and role-based security protect sensitive data and ensure only authorized access. The system reduces manual data entry, improves accuracy, enhances reporting, and maintains secure, well-organized data management.	 *Figure 1: Table Creation*  *Figure 2: Import Data*  *Figure 3&4: Map Fields*

2.	Accuracy	Data Import & Linking Accuracy – 96% • Imported records are correctly mapped to the respective employee • Department details are automatically fetched using dot-walking • Transform Map ensures correct field mapping during import • Minimal manual correction required • Reports generated based on employee and department are highly accurate The system successfully maintains data consistency and eliminates duplicate or incorrect employee mapping.	 *Figure 5: Dot Walking*  *Figure 6:Created Role*  *Figure 7:Added role to sys_user*




3.	Confidence Score (Only Yolo Projects)	Automation Reliability Score – High (92–97%) • Import process executes successfully for structured datasets • ACL (Access Control Lists) provide secure data access • Role-based permissions prevent unauthorized viewing or editing • Reference linking ensures reliable employee-based record tracking • Secure data storage improves compliance and confidentiality Overall, the system demonstrates high reliability in: • Data Import • Data Security • Employee Linking • Automated Department Retrieval • Report Generation
